THE INTERDEPENDENCY

A0 GUI

Recovered requirements

Conversation record / September-November 2026

01 Explore the system

SEP 18-19 / accepted v0.0.1 / source [1]

Narrative | **Relations** | **Attention**

System + nested narrative contexts
Tap objects to inspect their connections

Skills → **Tools** → **Operations**

Skills require tools; tools expose operations.

State + evidence remain visible

Working | Construction | Broken | Deprecated

Cross-cutting labels • source + freshness
Reliability A-F / credibility 1-6
Knowledge about you + authority to use it

Three next-step ranges

Minimal
smallest action

Maximal feasible
possible now

Maximal potential
unmet prerequisites

An intention can be selected without being executed.

02 Work in conversation

OCT 27 / interface build brief / source [2]

Phone first. ChatGPT-style interaction.

Chat • files/images • voice • projects • tools

OpenAI / Anthropic / xAI / DeepSeek

Bring your own keys; DeepSeek initially selected.

When changing provider or model

New conversation
Start with standard harness context.

Continue / one answer
Carry the full intended conversation.

Compare models
Give participants the same prompt + context.

One shared context snapshot

Model A
attributed answer

Model B
attributed answer

+ C, D ...
expandable set

Two models is the normal use case; the participant set remains extensible.

By default, all responses feed every model. A selected subset must be shared equally; excluded answers stay saved.

Three independent choices

- **Participants** — Who answers?
- **Future context** — Which responses go forward?
- **Tool executors** — Who may perform the proposed actions?

Tool choice: one / subset / all / cancel

MCP: connect, authenticate, discover, enable/disable.
Show call status, results, and cancellation outcome.

03 Expose controls. Keep continuity.

OCT 29-NOV 3 / later amendments / sources [3-5]

OCT 29

Private website on the existing VM

Authenticated, responsive HTTPS access. This replaces the Replit and separate native-APK delivery gates.

OCT 29-30

Context, agents, and modules

Edit context with cache awareness. Spawn agents and use tools. Create, display, and hot-swap temporary modules on spawn. Include AHBG.

OCT 30

Make supported choices accessible

Expose model controls and available options.

NOV 3

Mobile reliability + carousel comparison

Working menu, microphone, and speaker. Visible attachments. Find conversation history; retain it when switching apps. Compare responses side by side or in a carousel.
